

5000 Series Gorell Single-Hung/Slide Windows

The moment your new 5000 Series Gorell windows are installed, your home will feel more comfortable and look more beautiful. That's because Gorell windows are the result of expert design, exceptional attention to detail, advanced technology and the finest materials and hardware.

LOWER YOUR ENERGY BILLS WITH ENERGY STAR® QUALIFIED WINDOWS

Gorell windows are so efficient that every unit incorporating low-emissivity (Low-E) glass meets ENERGY STAR® standards. They've been tested and rated by an independent laboratory to qualify for the ENERGY STAR® label. Other features that improve efficiency and save you money:

- Heavy-duty welded vinyl frames—with separate internal chambers—improve the insulating properties of 5000 Series windows.
- PPG's Intercept® warm-edge spacer system reduces conducted heat loss through the glass.
- Automotive-type glazing provides a tight seal that actually strengthens as wind pushes against it.

HELP PROTECT YOUR FAMILY AND HOME

Gorell 5000 Series windows are built with especially tough locking hardware, making it extremely difficult for intruders to force open the sashes. They are so structurally superior that every model

5002 Two-lite Single-Slide Lift-out Window

submitted for American Architectural Manufacturers Association (AAMA) forced-entry tests has passed.

You can get the ultimate in protection by choosing Gorell's Armor Glass® Plus system in your windows. In tests, these windows—featuring super-strong laminated glass—can withstand as many as 30 hits before they can be penetrated. This glass system also significantly reduces outside noise and helps block UV radiation that fades upholstery and carpeting.

GORELL 5000 SERIES WINDOWS INCORPORATING A LOW-EMISSIVITY (LOW-E) COATING ARE ENERGY STAR® QUALIFIED.

For even greater energy savings, select from numerous high-performance Gorell glass systems that feature SolarControl Plus® low-emissivity coatings and an inert gas fill. For the maximum in energy savings, choose one of our premium glass systems, like Thermal Master III®, which consists of triple-insulating glass with two Low-E coatings and an inert gas fill.

SAVE TIME ON CLEANING AND MAINTENANCE

You'll love the many lifestyle advantages built into Gorell 5000 Series windows. Spend less time cleaning with windows made for today's hectic schedules—windows that never need scraping or painting. The operating sash on our single-hung model tilts in for easy access to outside surfaces. And all Gorell windows are engineered and built with the highest-quality materials to require less cleaning time and effort.

If you really want to minimize window cleaning, ask your window professional about SolarShine™, an innovative coating that's actually part of the glass. It makes the glass easier to clean and keeps it clean for a longer time.

CHOOSE THE SMOOTHEST OPERATING WINDOWS EVER CREATED

Gorell windows are engineered to provide smooth, effortless movement. Single-hung models feature Gorell's unique Constant Force Balance system. Unlike cumbersome block-and-tackle or spiral balance systems with problematic strings and springs, our constant force balance system gives you fingertip operation. Nothing on the market today can approach the smooth operation and durability of this system.

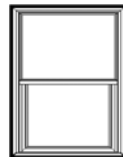

ACHIEVE A UNIQUE, PERSONALIZED LOOK FOR YOUR HOME

Gorell 5000 Series windows are available in soft white or almond (clear-through) vinyl. Select from a number of options and grid styles—and from a variety of decorative glass patterns.

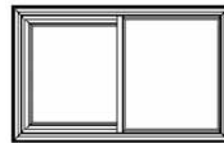

MAKE LIFE MORE COMFORTABLE AND HEALTHY

Never underestimate the difference quality windows make. Besides saving money on your heating and cooling bills, you'll notice they eliminate drafts, cold and hot spots, reduce outside noise and make your home a more enjoyable and healthier place to be.

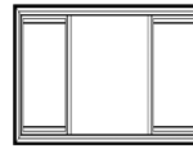

The exceptional beauty, design and quality of Gorell 5000 Series windows make them the smart choice. You also get Gorell's unparalleled warranty, the most comprehensive in the industry. Your window professional has the details.
